SUMMARY

Graduate Business Analyst who translates ambiguous business problems into clear, actionable recommendations. Comfortable diagnosing a situation: understanding stakeholder needs, structuring a problem, and identifying the right path to solve it, then following through on implementation rather than stopping at the recommendation. Technically literate enough to work directly with developers and engineering teams (C#, ASP.NET Core, HTML, CSS, JavaScript at an intermediate level), which sharpens rather than replaces the analytical and people-facing work: I use it to ask better questions of technical teams and validate that a proposed solution is actually buildable. Proved this end-to-end by identifying a real inefficiency (slow manual document review), designing an AI-powered solution, and validating a ~90% reduction in review time through stopwatch-tested evidence rather than assumption. BA graduate (International Relations, UNISA), completing a Postgraduate Diploma in Management (Business Administration) at Wits Business School, December 2026. Available for full-time opportunities from October 2026.

PROJECTS

Fundulwazi AI: AI-Powered Document Intelligence Platform 2026 (Phase 1 deployed)

- Identified the problem: slow, manual review of lengthy documents, and owned the build end-to-end using Blazor Server (.NET 8), ASP.NET Core, and GitHub Models (GPT-4o mini), shipping a working platform with AI-powered document summarisation and key information extraction
- Resolved backend integration challenges and implemented access-key-gated sharing so document access can be restricted to authorised users, working through prompts, data flow, and system constraints to reach a functioning solution
- Built semantic search across uploaded documents to reduce manual document review, iterating on the tool based on how it performed against real, lengthy documents
- Validated the tool against manual reading rather than estimating: stopwatch-timed testing across 2 documents (9–13 pages) showed a ~90% reduction in initial document-review time (manual review 15:39–20:00 vs. Fundulwazi 1:24–2:15, including processing and summary-reading time)

PROFESSIONAL EXPERIENCE

Founder & Program Lead, Flow Freedom (initiative of Ubusha Bami) Jan 2026 – Present

- Coordinated menstrual health awareness initiatives, supporting 2 schools with sanitary towel provisions for a full year
- Supported donor engagement and partnership communication, securing sponsorships to sustain dignity pack campaigns
- Contributed to community outreach and programme coordination, building stakeholder relationships with schools and community partners

Business Administration Learnership, Seriti Resources April 2025 – April 2026

South African mining and energy company, hosted by GLU, Emalahleni

- Supported document control and administrative processes across multiple business functions, maintaining accurate records and structured reporting to support compliance and operational decision-making
- Contributed to efficient document management and cross-team communication, collaborating with internal teams to improve workflow coordination
- Recognised as a Top Performing Learnership Student (Q1 and Q2) for consistent performance in administrative operations and stakeholder communication

EDUCATION

Wits Business School, Johannesburg

Dec 2026

Postgraduate Diploma in Management (Business Administration)

Coursework: Strategic Management, Operations Management, Business Disruption and Innovation, Financial and Management Accounting, HR Management and Organizational Design

- Syndicate project, Sisonke Kwezempilo: as part of a graduate venture-design business case, identified a gap in rural emergency care in South Africa (extended EMS response times leaving patients unsupported in the interim) and proposed a phased-response strategy (patient triage → community responder → hospital handover), grounded in South African health-system data. Built and deployed a standalone HTML/CSS/JS prototype simulating the workflow, including GREEN/YELLOW/RED triage, responder escalation, and QR-coded hospital handover

University of South Africa (UNISA), Pretoria

Completed Dec 2025

Bachelor of Arts in International Relations, Major: International Politics

SKILLS

Programming Languages: C#, HTML, CSS, JavaScript (Intermediate)

Computer Software / Frameworks: ASP.NET Core, Blazor, Git/GitHub, Microsoft Excel/Word/PowerPoint, Google Workspace, Canva, Adobe Illustrator

Cloud & AI Tools: GitHub Models (GPT-4o mini)

Certifications: IBM SkillsBuild – Getting Started with Artificial Intelligence (2026); IBM SkillsBuild – Web Development Fundamentals (2026); AWS Cloud Practitioner Essentials (2026)

Additional Technical Training (Microsoft Learn, coursework completed 2026): Azure Fundamentals; AI Fundamentals; Microsoft 365 Copilot & Agent Administration; Git/GitHub Basics
